Ant Design Pro

This project is initialized with [Ant Design Pro](#). Follow is the quick guide for how to use.

Environment Prepare

Install `node_modules`:

```
npm install
```

or

```
yarn
```

Provided Scripts

Ant Design Pro provides some useful script to help you quick start and build with web project, code style check and test.

Scripts provided in `package.json`. It's safe to modify or add additional script:

Start project

```
npm start
```

Build project

```
npm run build
```

Check code style

```
npm run lint
```

You can also use script to auto fix some lint error:

```
npm run lint:fix
```

Test code

```
npm test
```
